Cross Auger Range

Rear Trailer Mounted – Back Door Mounted – Drill Filler – Pulled Trailer auger

The Cross Auger range is built to the highest standards by a team of dedicated engineers using quality materials and manufactured in the latest high-tech manufacturing facilities. Our Hydraulic Driven Augers can deliver class leading levels of performance and reliability to exceed the expectations of the most demanding users.

Hydraulic Auger Build

Our quality Hydraulic Auger range is manufactured with the requirements to cover a wide range of farming needs in mind. We can also build our augers to suit your specifications giving you the benefits of our flexible manufacturing process.

Cross Hydraulic Driven Augers are manufactured in various sizes. Our augers can be mounted on any trailer door or as a full door mounted system. We also provide both a seed drill mounted system, trailed auger and trailer mounted, which is mounted on its own heavy-duty chassis. All Cross Augers are given two coats of priming paint followed by two finish coats. Our augers are also oven baked after spraying takes place giving the augers long lasting durability. We can also provide fully stainless steel augers to provide a high level of corrosion resistance across all Cross Augers.

Process

The Hydraulic Auger range is specifically designed to make filling any seed drill or fertilizer spreader easy. Cross Agricultural Engineering Augers are designed with the farmer in mind, our trailer augers can be fitted with different size deflector chutes to allow for even filling. This means that each auger will be built to suit your specific needs. We manufacture each filler auger to suit your trailers rear door, either as a bolt on system or a fully mounted one piece auger and rear door.

Trailer door Auger

Cross Agricultural Engineering manufacture a range of different augers to the customers specifications. These augers are custom built in either stainless steel or mild steel and painted with 2 pack paint. Whether you are unloading feed, seed or fertilizer, the Cross Trailer Augers help you unload quickly, effortlessly and precisely. It's a time and labour-saving tool to make the entire operation as efficient as can be.

Quick attach mounted Door Auger

Speed up the handling of all your bulk materials by equipping your agri trailer with the Cross Quick Attach Auger. It mounts quickly and easily on your trailer door and makes unloading of seed and fertilizer virtually effortless. Detaching the trailer auger after use is made easy with the help of trailer mounted hydraulic quick fit attachments along with four pins and clips. These augers come with a 4-bank valve chest for controlling the auger from the back of the trailer. Spreader filling chutes can be fitted to these augers.

Hydraulic Trailer Door Auger

The Cross Trailer Auger can be mounted to any trailer. These augers are built as part of the back door. Trailer augers are also hydraulic folding and can be purchased in various sizes depending on customer specifications. All our Trailer Door Augers are piped directly to the trailer and can be disconnected by means of a hydraulic quick attach. We also fit each auger with its own valve chest to allow the control of movement from behind the trailer and not from the driver seat.

Range of Trailer Augers

- All hydraulic augers are built to the customers specifications.
- All augers can come in stainless or mild steel with 2 pack oven baked paint.
- All augers have hydraulic movement unless otherwise specified.
- Various outputs of augers can be ordered.
- Deflector hoods or spreader filling chutes can be fitted to all augers.

Cross Agricultural Engineering – “It’s the Obvious Choice”

Range of Trailed & Mounted Augers

All Cross Hydraulic Augers are built to the customers specifications. The Cross Drill Filler Auger and Trailed Auger are designed to eliminate the back breaking chore of lugging heavy bags of seed up the stairs and on or off platforms. Now all you have to do is load the bags or bulk from the ground level hopper and let the Drill Filler or Trailed Auger do the heavy lifting. For the range of options please discuss with a Cross sales representative.

Drill Filler Auger

The Cross Drill Filler Auger utilizes a single auger mounted on the rear of the drill. Our rugged yet simple design will tolerate transport over even the roughest of terrain. The mounting brackets do not interfere with the drill its being mounted to. No modifications to the drill are required. This drill filler allows you to reverse a trailer of seed up to the drill or fill with bags without any manual handling of products or climbing.

Trailed Auger

The Cross Trailed Auger has been developed to simplify the load of seed and fertilizer in a clean and safe environment. The auger uses hydraulics to load seeders or fertilizer spreaders. The auger has been developed so that it can be used in various situations. This is achieved with the rotating radius and the height adjusting ram. The rotating radius on the heavy-duty trailer allows the operator to evenly fill drills or spreaders without causing spillages. The variable height can also be adjusted to allow for use on numerous different applications. All controls of the auger can be carried out from the valve chest mounted on the machine.

“It’s the Obvious Choice”

Cross Agricultural Engineering is the result of 5 generations of metalworking skills within the Cross Family. This heritage has provided a solid foundation for manufacturing.

This literature is designed for worldwide circulation. Due to continuing policy of product improvement, we reserve the right to alter specifications and constructions without notice. As machines are exported to many different countries, general information, pictures and descriptions are provided; these should be taken as approximate and may include optional equipment that is not part of the standard specification. Please consult your local dealer/distributor for further information.
